

COLLEGE OF INFORMATION TECHNOLOGY

IT113 – System Administration & Maintenance

Assessment III

Final Assessment: With given scenario. Discuss in details.

Submit in pdf format e.g. JUEGO_Finalassessment.pdf

Considering one emerging technology in System Administration & Maintenance that you would like to develop in the future, write your proposed title of the project and together with your preferred user interface design and detailed explanation of each module.

SYSTEM DESIGN FORMAT

Overview

The System Design Document describes the system requirements, operating environment, system and subsystem architecture, files and database design, input formats, output layouts, human-machine interfaces, detailed design, processing logic, and external interfaces.

1. INTRODUCTION

1.1 Purpose and Scope

This section provides a brief description of the Systems Design Document's purpose and scope.

1.2 Project Executive Summary

This section provides a description of the project from a management perspective and an overview of the framework within which the conceptual system design was prepared. If appropriate, include the information discussed in the subsequent sections in the summary.

1.2.1 System Overview

This section describes the system in narrative form using non-technical terms. It should provide a high-level system architecture diagram showing a subsystem breakout of the system, if applicable. The high-level system architecture or subsystem diagrams should, if applicable, show interfaces to external systems. Supply a high-level context diagram for the system and subsystems, if applicable.

1.2.2 Design Constraints

This section describes any constraints in the system design (reference any trade-off analyses conducted such, as resource use versus productivity, or conflicts with other systems) and includes any assumptions made by the project team in developing the system design.

1.2.3 Future Contingencies

This section describes any contingencies that might arise in the design of the system that may change the development direction. Possibilities include lack of interface agreements with

outside agencies or unstable architectures at the time this document is produced. Address any possible workarounds or alternative plans.

1.3 Document Organization

This section describes the organization of the Systems Design Document.

1.4 Points of Contact

This section provides the organization code and title of the key points of contact (and alternates if appropriate) for the information system development effort. These points of contact should include the Project Manager, System Proponent, User Organization, Quality Assurance (QA) Manager, Security Manager, and Configuration Manager, as appropriate.

1.5 Project References

This section provides a bibliography of key project references and deliverables that have been produced before this point.

1.6 Glossary

Supply a glossary of all terms and abbreviations used in this document. If the glossary is several pages in length, it may be included as an appendix.

2 SYSTEM ARCHITECTURE

In this section, describe the system and/or subsystem(s) architecture for the project.

Discuss in your system project design:

- a. Operational Feasibility – how reliable the system/project efficient when it deploy?
- b. Technical Feasibility – what are the system/project resources needed during development?
- c. Schedule Feasibility – Time table / Gantt chart with discussion.
- d. Economic Feasibility – Cost Benefit analysis (CBA) with a five year projection summary & discussion.

Assessment Rubric:

Criteria (%)	100	90	80	70
Accuracy	Accurate, comprehensive, and sufficiently specific user requirements and technical specification.	Accurate user requirements and technical specification that cover most aspects of the system.	User requirements and technical specification cover only some aspects of the system, and miss some significant aspects, or characterize them inaccurately.	Insufficient user requirements and technical specification: meeting the stated requirements and specifications does not solve the stated problem.
Organization	All information is easy to find and important points stand out	Can find information with slight effort.	Information difficult to locate.	Very hard to find information.
Completeness	All major system components are identified.	Most major system components are identified.	Only some system components are identified. Some major components are missing.	Non-representative, or missing system components.
Diagrams and Illustrations	Diagrams and illustrations are neat, accurate and add to the reader's understanding of the topic.	Diagrams and illustrations are accurate and add to the reader's understanding of the topic.	Diagrams and illustrations are neat and accurate and sometimes add to the reader's understanding of the topic.	Diagrams and illustrations are not accurate OR do not add to the reader's understanding of the topic.
